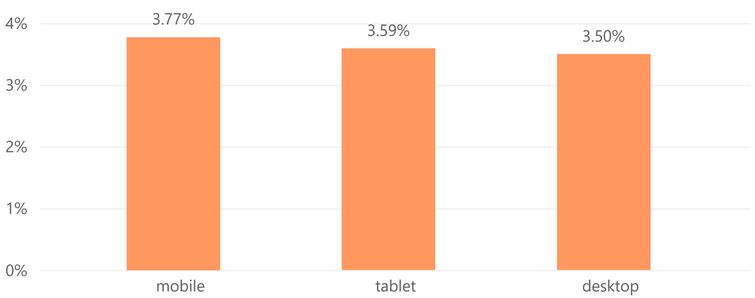
Device Performance | Ordered View-to-purchase Rate



Mobile leads descriptively; the 95% user-cluster bootstrap interval includes zero (−0.004 to +0.545 pp). No causal device effect established.

GA4 sample ecommerce • 4,295,584 events across 92 days. Users are observed pseudonymous IDs. Purchase rate = purchasing sessions ÷ all sessions. Explore journey, acquisition, retention, and device pages for detail.
